BUYING A MAXIMUM WI-FI INSTRUMENT

WHY YOU SHOULD UPGRADE

While Wi-Fi connectivity is an add-on feature for Maximum instruments and weather stations, it is a wise investment. Adding this feature allows for native sharing with Weather Underground.

It's also an upgrade that at the time of purchase is **much cheaper** to select versus purchasing the necessary hardware later.

COMPATIBLE INSTRUMENTS

Not all Maximum instruments have the capability to share data via Wi-Fi. The following instruments are Wi-Fi capable: any weather station with these instruments is also included.

- Maestro
- Mystic
- Mini-Max
- Merlin
- Rainwatch

PURCHASING THE SETUP KIT

The most important piece of your Maximum Wi-Fi setup is the setup kit. This contains two parts:

- An instrument interface
- A sensor interface

The instrument interface connects to your network, and receives data from the sensor interfaces.

MULTIPLE WI-FI INSTRUMENTS?

Important: Once you purchase the setup kit, any future Maximum instrument must be Wi-Fi ready, and include the sensor interface to connect to the instrument interface.

To ensure you receive the right hardware, select the Wi-Fi option **without** the setup kit for all other instruments you purchase. *(We do check all Maximum orders for completeness.)*

Need help placing your order? We'd be glad to assist. E-mail us today to get started.

MAXIMUM® WEATHER INSTRUMENTS **AUTHORIZED RESELLER**

cirruslyweather.com

Every Wi-Fi capable Maximum instrument offers up to three choices when you add it to your cart: No Wi-Fi, Wi-Fi + Setup Kit, and Wi-Fi Included. Here is which one to pick.

WI-FI + SETUP KIT

Your first Wi-Fi instrument. Adds both interfaces.

After that, choose Wi-Fi Included on every Maximum instrument you add. **Do not buy the setup kit more than once!**

WI-FI INCLUDED

Every instrument after the first. Adds a sensor interface.

Preassembled Maximum weather stations work differently: they have a single Wi-Fi option.

WEATHER STATIONS

One option covers the Setup Kit and every instrument.

Adding Wi-Fi hardware later costs considerably more than choosing it at checkout. **We strongly recommend you opt for Wi-Fi at the initial time of purchase!**
